

Proceedings of the annual meeting Volume 29

By Ohio Society of Engineers

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 82 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . . . of drift origin. None of these materials are in their pure state but were deposited when the current was reduced upon leaving the main channel. The grade of the material depends on the section of country from which the flood comes and the strength of the current. In the flooded districts, during the earlier history, there seems to have been a greater deposit from the western streams which carried the gumbo from the drift sections, but as time elapsed the shifting of the current has handled and rehandled the material until even expert geologists are at a loss to determine the old sections of the valley from the new, except those formed in recent years. The clays above referred to are at times mixed with sand and loam of various sections and form a hard, brittle material, which, when dry, breaks into small fragments...
